

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings of claims in the application. Applicants have submitted a new complete claim set showing any marked up claims with insertions indicated by underlining and deletions indicated by strikeouts and/or double bracketing.

**Listing of Claims:**

1-6. Canceled

7. (Currently amended) A method for presenting enhanced broadcast television programming comprising the steps of:

receiving a schedule for a plurality of broadcast television listings, each of the plurality of television listings including a unique event identifier;

receiving enhanced Internet protocol (IP) data including an event identifier associating the IP data with one of the plurality of television listings, wherein the IP data corresponds to broadcast television programming currently available to a viewer;

presenting a visual cue to the viewer based on the IP data on a video display, wherein the visual cue comprises an active status indicator indicating ~~the~~ status of one or more currently available broadcast television programs, wherein the status indicates in real-time whether the one or more currently available broadcast television programs is currently active or inactive;

receiving a viewer selection of the visual cue; and

tuning to a channel associated with the event identifier in response to viewer selection of the visual cue.

8. (Original) The invention as in claim 7 wherein the video display is a conventional television receiver.

Type of Response: Amendment  
Application Number: 09/903,973  
Attorney Docket Number: 164052.02  
Filing Date: July 12, 2001

9. (Original) The invention as in claim 7 wherein the Internet protocol data comprises a portion of the available television programming.

10. (Canceled)

11. (Previously presented) The invention as in claim 9 wherein the Internet protocol data portion is filtered to correspond to currently available sports television programming.

12. (Original) The invention as in claim 11 wherein the Internet protocol data portion is filtered to correspond to other sports television programming currently in progress.

13. (Previously presented) The invention as in claim 9 wherein the portion corresponding to the available television programming is the same as the event identifier corresponding to the IP data.

14-15. Canceled

16. (Currently amended) A client system for receiving a broadcast television navigation service comprising:

means for receiving broadcast television programming;

means for receiving Internet protocol (IP) data that is not provided in a program band of the broadcast television programming, wherein the IP data corresponds to broadcast television programming currently available to a viewer;

means for linking the broadcast television programming with the Internet protocol data;

means for presenting a visual cue to a viewer based on the IP data on a display, wherein the visual cue comprises an active status indicator indicating the status of one or more currently available broadcast television programs, wherein the status indicates in real-time whether the one

or more currently available broadcast television programs is currently active or inactive;

means for receiving a viewer selection of the visual cue; and

means for tuning to a channel associated with the IP data in response to viewer selection of the visual cue.

17. (Previously presented) The invention as in claim 16 wherein said means for receiving broadcast television programming and means for receiving Internet protocol data comprises multiple digital tuners.

18. (Previously presented) The invention as in claim 16 further comprising a digital video recording apparatus disposed to record one or more of the received broadcast television programming.

19-28. Canceled

29. (Previously presented) A method for delivering enhanced broadcast television programming data comprising the steps of:

receiving a schedule for a plurality of broadcast television listings, each of the plurality of television listings including a unique event identifier;

receiving enhanced Internet protocol (IP) data including an event identifier associating the IP data with one of the plurality of television listings, wherein the IP data corresponds to broadcast television programming currently available to a user;

presenting a visual cue to the user based on the IP data on a display device, wherein the visual cue comprises a real-time event alert informing the user of an action that is about to occur in one or more currently available broadcast television programs;

receiving a user selection of the visual cue; and

tuning to a channel associated with the event identifier in response to user selection of the visual cue.
